11. The arguments are not persuasive. The Examiner apologizes for the minor error indicating in the previous Office Action that Watt suggests creating a skin with a grain. The Examiner intended to indicate that Watt suggests creating a sueded surface, which is evident by the discussion and disclosure of Watt. The Applicant has referred to evidence in the Specification to support why the height of the projections is critical but has not shown why the properties associated with the height are unexpected. The Applicant compares the instant invention to a skin having a flat surface and conventional structure. In order to establish unexpected results, the Examiner highly suggests to the Applicant to submit a 37 CFR 1.132 Declaration. In the Declaration, the Applicant should compare a sufficient number of tests both inside and outside the claimed range to show the criticality of the claimed range. In re Hill, 284 F.2d 955, 128 USPQ 197 (CCPA 1960) and must compare the claimed subject matter with the closest prior art to be effective to rebut a prima facie case of obviousness. Presently, the Applicant has not compared the instant invention to the closest prior art. The rejection is maintained.
